Solutions

Automatic Doors, Access Controls and Carparks
ABOUT CARLO GAVAZZI

Carlo Gavazzi Automation is a multinational electronics group active in the design, manufacture and marketing of electronic equipment targeted at the global markets of industrial and building automation.

Our history is full of firsts and our products are installed in a huge number of applications all over the world. With more than 80 years of successful operation, our experience is unparalleled.

We have our headquarters in Europe and numerous offices around the world.

Our R&D competence centres and production sites are located in Denmark, Italy, Lithuania, Malta and the People’s Republic of China.

We operate worldwide through 22 of our own sales companies and also selected representatives in more than 65 countries, from the United States in the West to the Pacific Rim in the East.

Our core competence in automation spans three product lines: Sensors, Switches and Controls.

Our wide array of products includes sensors, monitoring relays, timers, energy management system, solid state relays, safety devices and fieldbus systems.

We focus our expertise on offering state-of-the-art product solutions in selected market segments.

Our customers include original equipment manufacturers of packaging machines, plastic-injection moulding machines, food and beverage production machines, conveying and material handling equipment, door and entrance control systems, lifts and escalators, as well as heating, ventilation and air-conditioning devices.
DESIGNED TO MEET MARKET REQUIREMENTS

The market for automated doors is growing and becoming more specialised. The type of product that fits best with a particular application is determined by frequency of operation, speed of operation required, new versus existing construction, traffic flow and cost. Automatic doors are a normal feature in many commercial buildings and infrastructures such as shopping centres and airports, as well as in industrial environments such as factories and also in residential buildings. Although they come in a variety of types, including sliding, swing, folding, up-and-over etc.; they all need to conform to the highest standards of safety.

In an industrial environment, which is the largest part of our business, automatic doors enable the set temperature in cold storage rooms to be maintained by fast opening and closing, leading to considerable energy efficiency and reduction of costs. Automated doors in commercial facilities are the preferred means of access for all users, not only people with disabilities, and are a significant aid to accessibility. Moreover, their use minimizes heat or air conditioning loss, maintaining a constant temperature and consequently saving money.

This brochure highlights the following market applications: industrial doors, garage doors, pedestrian doors, access controls, gates and barriers, intended for installation in areas where the main purpose is to give safe access for goods and accompanied vehicles, in industrial and commercial premises and in residential garages. Carlo Gavazzi has developed its expertise in the Industrial Door segment of the market and our products are designed and manufactured in full compliance with both North American and European standards. Our product families are certified to meet EN 13241-1, EN 12978, EN 12445, EN 12453 and UL 325 regulations for safety in the use of power operated doors such as industrial and garage doors and gates.

A further solution that Carlo Gavazzi can provide is the Parking Guidance System, by means of which more convenience for drivers is assured, along with considerable cost savings to the car park owner.
Automatic doors in an industrial environment need to conform to the highest standards of safety. Carlo Gavazzi products are designed to meet the latest safety regulations for object and human presence detection. Our sensors are typically installed in shutter, folding, speed and sectional Automatic doors in an industrial environment need to conform to the highest standards of safety. Carlo Gavazzi products are designed to meet the latest safety regulations for object and human presence detection. Our sensors are typically installed in shutter, folding, speed and sectional doors.

We offer the compact, powerful, polarized, retro-reflective PM.. series and the PD86 series photoelectric sensors. These sensors are equipped with a test input that allows the user to test the sensing functions in each door cycle. As well as the retro-reflective sensors, Carlo Gavazzi provides the long range background suppression PD112 series and the new battery-powered emitter of the PD180 series. In door applications, where speed is important and door movements are frequent, the spiral cable between the moving door and the controller is susceptible to wear and tear. Our Wireless Safety System reduces difficult and costly repairs and avoids

</table>
expensive downtime. Moreover, this system uses 16 different channels in order to prevent cross-talk between adjacent doors.

The Wireless Safety System is very flexible and handles different safety edges such as: “Normally Closed” safety edges, “Normally Open” and 8.2 kOhm.

Precise control for the speed and positioning of the doors is ensured by using the RVLF series of Variable speed drives.

Energy savings are attained by reducing the start-up current and maintenance costs are lowered by reducing vibration during start-up.

The brand new DEA71 and DEB71 - modular residual current devices - protect electric installations against the risk of fire or electrocution of people, in case of insulation failure. They are able to detect a leak of current to the Protective Earth by means of the external Core Balance Current Transformer (CTG), provide a warning signal at 60% and trip the MCB, through the relay output, when the leakage exceeds 80% of the set fault current.
The Carlo Gavazzi Wireless Safety System is designed to eliminate the need for traditional spiral cables between the door controller and the door. This device utilizes a bidirectional radio communication with an operating frequency of 2.4 GHz, making it less susceptible to common radio interference.

This system is compatible with a large variety of safety edges and can also be used with the Carlo Gavazzi low consumption photoelectric safety edge sensors. In door-in-door applications, the larger door has to remain shut when the pedestrian door is open. This safety function is monitored by the sub controller’s door-in-door limit switch input by means of our Wireless Safety System.

To prevent a door from closing when an object is present in the doorway, we offer a variety of sensors based on through-beam detection or polarized retro-reflective types. The PD98, PE12, or PM.., PD86.. sensors are typical examples of sensors designed specifically for automatic doors, taking into account the viewing angles and testing requirements of Europe and North America.

Our polarized retro-reflective sensors integrate the emitter and receiver in the same unit. The emitter generates a modulated light beam, which is retro reflected - rotated 90° - and sensed by the receiver. The output changes status if an object interrupts the light reflected. To increase immunity from objects with highly reflective surfaces, the retro-reflective sensor can be equipped with polarization filters. The receiver cannot be activated by light waves reflected by a shiny surface.
When mounting photoelectric sensors on a large gate, it is necessary to bury the cable from the control panel to the sensor. With the Carlo Gavazzi PD180 through beam sensors, this operation can be avoided, as built-in batteries in the emitter are part of the sensor set. The compact and stylish PD98 series sensors provide a means for easy wall mounting without building the sensor into the wall. The sensing angle reduces light interference and malfunctions or disconnections are revealed.

Our new series of sensors, PD140, has been developed with regard to the latest regulations in Europe and North America. These sensors offer state-of-the-art sensing distances of up to 60 m in outdoor applications and, with the unique green laser alignment tool, they can be installed quickly and easily.

One of the most used photoelectric sensors in large and heavy gates is the MOF+S142 system. Specifically designed for these applications this system offers compact size, durability and high detection range.

The WSM/WSS Wireless system for safety edges is also available for gates with a communication distance of 15 m. The main module can control up to 6 sub modules i.e. 12 safety edges. Separated outputs for opening and closing edges, as well as one alarm output for low battery indication.
Doors & Access controls

Pedestrian doors

It is mandatory to protect people standing in the doorway of a pedestrian door. For this purpose, Carlo Gavazzi offers the Guardian series, a motion and presence visual sensor which monitors people approaching the entrance, giving a signal to the door controller to open/close the door. These overhead sensors combine automation and safety in both curved and straight sliding door installations. Equipped with the latest digital video camera technology, this is the only device with Uni- and Bi-directional modes available in one single sensor. These sensors operate either with motion zone – detecting moving objects only – and a presence zone, detecting both movement and presence. The Guardian series has been designed to ensure perfect door control and, at the same time, to watch over entrance and exit areas, safeguarding the people who use them. By means of the smart technology used, the Guardian series is able to ignore cross traffic and to self-adjust, according to changes in weather conditions and environment.

The Guardian series is TÜV-certified according to DIN 18650-1 (prEN 16005), EN13241-1, EN12978, EN61508, ENISO13849-1:2008. It is also cURus approved according to UL325, CSA-C22.2 no.247.

The PD70 sensor is a traditional through-beam sensor set with test input, designed to fit into the narrow aluminium profiles of pedestrian doors.

Additionally, Carlo Gavazzi offers the PD112 series, which is a ‘background suppression’ sensor, which is typically positioned above the door, turning its detection field down to the floor. Black object detection is assured as far as 2m, while grey and white objects are detected up to 2.5m, a record distance that places the PD112 series among the longest range background suppression sensors designed for pedestrian doors in the world.
Access control systems are increasingly used to restrict and record unauthorized access. In optical turnstiles, photoelectric sensors detect people passing through. In subways, security buildings and fairgrounds, access controls such as turnstiles are used in order to ensure that only people with a valid ticket can pass through the entrance.

The access control systems include up to 15 sets of photoelectric sensors for the monitoring operation. The sensors used are retro-reflective or through-beam with invisible infrared light, in order to avoid any damage caused by vandals.

Carlo Gavazzi’s PB10 and PE12 series sensors represent state-of-the-art technology in this field. They are available in two main versions: the PE12 series (Ø12mm) with an innovative snap-in four-spring head for quick installation, and the PB10 series (Ø10mm) with a high environmental rating and a smooth cylindrical housing.

The long detecting range of the PD30 sensor also allows it to operate through dark glass, where its position can be hidden.
Our expertise in Parking Guidance System

The Carpark system is based on Carlo Gavazzi’s expertise in sensing and communications technology within the industrial automation market. Our patented Dupline® 3-wire bus forms part of a tried and tested network, with more than 150,000 installations worldwide.

The system is completely scalable and can be used in any type and size of indoor carpark. In spite of its advanced functions, the system is easy to install and configure, allowing detection, counting and indication of vacant spaces.

By means of signs with directional arrows and LED indicators, drivers are guided to the closest vacant parking bay, resulting in considerable time saving, especially if only few spaces are vacant.

Our Parking Guidance System not only provides drivers with more convenience and less stress, but by monitoring the whole situation of the parking area it increases efficiency in car flow, reducing energy costs. Cars can be directed to pre-selected areas of the carpark, while the system ensures that lighting and ventilation systems are disabled in unoccupied zones.

Carlo Gavazzi’s product range for carpark systems, in addition to the...
controller, sensors, LED indicators and displays, also includes products for smart building functions.

A unique feature of the system is the possibility to integrate control of lighting and ventilation into the same structure.

Lighting and ventilation are the two biggest energy consumers in a carpark, and often they are simply left ON continuously. By using demand-based control functions, where lighting and ventilation are switched on when needed, significant savings can be achieved.

By means of its built-in BACnet communication capability, the controller can be seamlessly integrated into any Building Management System.

Loop detectors are also part of Carlo Gavazzi’s product range for Car parks. Based on an inductive measurement principle, a coil of wire is buried in the ground, detecting cars driving over it. Typically it is installed in the ground in front of a security entry gate or to detect the occupancy of outdoor parking bays.

### MAIN FEATURES

- Light beam approved to Safety Category 2
- UL325, UL508, EN12445, EN12453, EN12978
- Coded sensors available for less crosstalk

### PD70

- Dimensions: 10 x 10.6 x 70 mm
- Power supply: 10 to 30 VDC
- Output NPN or PNP, Normally Open or Normally Closed
- Emitter with Mute Input for testing the sensor
- 12 m sensing distance

### MAIN FEATURES

- Light beam approved to Safety Category 2
- UL325, UL508, EN12445, EN12453, EN12978
- Coded sensors available for less crosstalk

### PD30

- Dimensions: 10.8 x 20 x 30 mm
- Power supply: 10 to 30 VDC
- Output NPN or PNP, Normally Open or Normally Closed
- Emitter with Mute Input for testing the sensor
- Through beam and Retro-reflective sensors

### MAIN FEATURES

- Light beam approved to Safety Category 2
- UL325, UL508, EN12445, EN12453, EN12978
- Visible polarized light or Infrared versions
- Used for Entrance systems

### PC50

- Dimensions: 17 x 50 x 50 mm
- Power supply: 10 to 30 VDC
- Output NPN or PNP, Normally Open or Normally Closed
- Emitter with Mute Input for testing the sensor
- Through beam and Retro-reflective sensors

### MAIN FEATURES

- Light beam approved to Safety Category 2
- UL325, UL508, EN12445, EN12453, EN12978
- Visible polarized light or Infrared versions

### PM

- Dimensions: 17 x 50 x 50 mm
- Power supply: 24 VAC/DC
- Relay output SPST
- Emitter with Mute Input for testing the sensor
- Through beam and Polarized Retro-reflective sensors

### MAIN FEATURES

- Light beam approved to Safety Category 2
- UL325, UL508, EN12445, EN12453, EN12978
- Visible polarized light or Infrared versions

  • Power supply: 24 VDC  
  • Nominal operating point: 12 mm  
  • One low power NC contact as a signal contact  
  • One high power NC contact to drive hard loads  | • Precise operation and consistency  
  • Various head types available - flexible installation  
  • High resistance to vibrations (25g)  |  |
| **PS42L** | • Delay on open/release, interval (manual/automatic start);  
  • Double interval; symmetrical recycler (ON or OFF first)  
  • Timing range from 0.1s to 100h  | • Ease of use, minimal settings  
  • PID control & torque boost capability  
  • Onboard protection features; e.g. stall prevention, PTC input  |  |
| **RVLF** | • PVC cable with connector for easy and fast installation  
  • Relay output  
  • Long life contacts  | • Delay on operate/release, interval (manual/automatic start);  
  • Double interval; symmetrical recycler (ON or OFF first)  
  • Timing range from 0.1s to 100h  |  |
| **Limit switches** | • Delay on operate/release, interval (manual/automatic start);  
  • Double interval; symmetrical recycler (ON or OFF first)  
  • Timing range from 0.1s to 100h  | • Delay on operate/release, interval (manual/automatic start);  
  • Double interval; symmetrical recycler (ON or OFF first)  
  • Timing range from 0.1s to 100h  |  |
| **Variable speed drives** | • PVC cable with connector for easy and fast installation  
  • Relay output  
  • Long life contacts  | • PVC cable with connector for easy and fast installation  
  • Relay output  
  • Long life contacts  |  |

### MAIN FEATURES

- DC OK signal
- Parallel connection
- Screw, spring or detachable terminal connectors
- High efficiency and wide operating temperature
- Screw, spring terminal connectors
- Adjustable output +/- 10%
- Low voltage LED indication
- Independent power supply and battery charger functions
- Remote indication for battery operation and status
- “Start from battery” and “Empty battery changing” features
- Screw terminals for fast connection
- Built-in replacement fuse
- DIN rail or panel mounting
- High switching power
- Long life span
- Comes with LED and Test button
- 5 mm ultra slim width
- DIN rail mount (ZRLS socket) or PCB mount (ZRLP)
- Surge voltage of up to 6 kV

CARLO GAVAZZI Automation Components. Specifications are subject to change without notice. Illustrations are for example only.
Doors & Access controls

Our product range

### 45° ultrasonic sensors

**SBPSUSL45**
- Ultrasonic sensor with 45° detection angle
- Built-in bright RGB LEDs with 360° indication
- Base holders for cable tray, ceiling and pipe mounting
- Dupline® 3-wire bus-powered
- Dimensions: Ø 116 x 76 mm

**MAIN FEATURES**
- Sensor and indicator in one unit
- Mounting at space entry to achieve optimum visibility
- Highbright multi-colour RGB LED's

### Vertical ultrasonic sensors

**SBPSUSL**
- Vertical sensor to be mounted directly above the car
- Built-in bright RGB LEDs with 360° indication
- Base holders for cable tray, ceiling and pipe mounting
- Dupline® 3-wire bus-powered
- Dimensions: Ø 116 x 76 mm

**MAIN FEATURES**
- Wide tolerance for mounting position
- Mounting on cable tray, ceiling or pipe
- Operates with external RGB LED indicator

### Vertical ultrasonic counting sensors

**SBPSUSCNT**
- Vertical sensor to be mounted in the driving lane for counting
- Fast reaction time to detect moving cars up to 20 km/h
- Base holders for cable tray, ceiling and pipe mounting
- Dupline® 3-wire bus-powered
- Dimensions: Ø 116 x 76 mm

**MAIN FEATURES**
- Detection of moving cars up to 20 km/h speed
- Mounting on cable tray, ceiling or pipe
- Easy installation and commissioning

### 360° LED indicators

**SBPILED**
- LED indicator to be mounted outside the parking space
- Multi-colour bright RGB LEDs with 360° indication
- Base holders for cable tray, ceiling and pipe mounting
- Dupline® 3-wire bus-powered
- Dimensions: Ø 116 x 76 mm

**MAIN FEATURES**
- High visibility of bright multi-colour RGB LED's
- 360° visibility
- Mounting on cable tray, ceiling or pipe

---

Sensors base holders | Carpark master generator | Carpark controller | Carpark server

**SBPBASEA / SBPBASEB**
- Base holders for Carpark sensors and LED indicators
- To be mounted on rail, ceiling or pipe/tube/conduit
- Dimensions: Ø 116 x 24 mm (type A) / Ø 116 x 44 mm (type B)
- Wire terminals built into base holder for easy change of sensor
- On-board address chip with SIN code

**MAIN FEATURES**
- Flexible mounting options for rail, ceiling or pipe/tube/conduit
- Spring terminals and chip with SIN-address integrated
- Rugged and robust housing

**SBP2MCG324**
- Generator of power and Dupline® bus communication on 3 wire
- Connected as a slave to the Carpark controller SBP2WEB24
- Connects up to 90 Carpark sensors via Dupline® 3-wire bus
- Powered from 28 VDC
- Dimensions: 2-DIN module

**MAIN FEATURES**
- Provides sensors and indicators with power and communication
- Provides power and communication for up to 90 ultrasonic sensors
- Compact DIN-rail housing

**SBP2WEB24**
- Parking guidance, carpark management and smart building controls in one unit
- Seamless integration with BMS through BACnet/IP
- Built-in webserver with user interface for carpark management software
- Powered from 24 VDC
- Dimension: 2-DIN module

**MAIN FEATURES**
- Integrated parking guidance, carpark management and energy savings
- Easy and fast commissioning through central PC-based tool

**SBP2CPY24**
- Carpark server with capability of linking up to 10 SBP2WEB24 together
- Built-in webserver with user interface for carpark management software
- Data export in excel format
- Powered from 24 VDC
- Dimension: 2-DIN module

**MAIN FEATURES**
- Enables parking guidance solutions for very large carparks
- Built-in webserver with user interface for carpark management software
- Easy and fast commissioning through central PC-based tool

<table>
<thead>
<tr>
<th>Carpark display interface</th>
<th>Carpark displays with symbols+digits</th>
<th>Carpark displays with digits</th>
<th>Carpark displays with digits</th>
</tr>
</thead>
</table>

**SBP2DI48524**
- Interface between the Dupline® bus and display
- Modbus RS485 serial connection to the display
- LEDs for indication of communication status
- Powered from 24 VDC
- Dimension: 2-DIN module

**SBPDISxxxx**
- Displays with green arrow/red cross for guiding the drivers
- Available with 0-3 digits for vacant space number indication
- Optional blue sign for disabled parking
- Automatic brightness control for high visibility
- Powered from 24 VDC

**SBPDISx**
- Displays with 2 to 4 digits to show number of vacant spaces for an area
- Bright white LED digits
- Same display for indoor/outdoor
- Automatic brightness control for high visibility
- Powered from 24 VDC

**SBPDIS9**
- Display with 9 character matrix with clear white LEDs
- Automatic brightness control for high visibility
- Dimensions: 215 x 950 x 45 mm
- Powered from 24 VDC

**3-phase monitoring relays**

**DP8A51**
- Dimensions: 81 x 17.5 x 67.2 mm DIN-rail housing
- Phase sequence and loss relay
- 3 phase AC (own power supply); regenerated voltage
- Power supply from 208 to 480 VAC (+/- 15%)
- UL, CSA and CCC approved

**MAIN FEATURES**
- Compressors protection from reverse running and phase loss
- 17.5 mm width: the smallest in the market
- Plug and play: no settings needed

**3-phase over/under monitoring relays**

**DPB02 / PPB02**
- 22.5 DIN (DPB02) or 35 mm Plug in (PPB02)
- Phase sequence and loss relay
- 3 phase asymmetry control
- Adjustable delay
- UL, CSA and CCC approved

**MAIN FEATURES**
- Motors protection from reverse running and wrong voltage symmetry
- Enhances motor lifetime
- No power supply needed, measure is made on supply voltage

**3-phase over/under monitoring relays**

**DPD**
- 22.5 mm DIN rail mounting Enclosure
- 120 VAC to 480 VAC Delta & Star mains
- Voltage and frequency monitoring
- 2 SPDT 8 A relay outputs
- NFC programming
- UL, CSA and CCC approved

**MAIN FEATURES**
- Up to 10 configurable set points
- Apps for Android and Windows PC programming

**Current monitoring relays**

**DIB02 / PIB02**
- Dimensions: 22.5 mm for DIN (DIB) or 35.5 for Plug in (PIB)
- Overcurrent or undercurrent detection
- DC current measurement by means of external Shunt
- Power supply: 115/230 VAC, 24/48 VAC, 24 VDC, 48 VDC
- Adjustable time delay

**MAIN FEATURES**
- Motors protection from Overload
- DC or AC current measurement
- three phase overcurrent measurement with MPS CT

### MAIN FEATURES

**DTA71/ DTA72**
- Multicolour LED with alarm discrimination
- Auto or manual, local or remote reset, test function (DTA72)
- Ready for reset function (DTA72)

**DEA71**
- Fixed trip current 30 mA or 300 mA
- Remote Test / Reset push button input
- Warning Indication and output

**DEB71**
- Adjustable trip current setting from 30 mA to 30 A
- Remote Test / Reset push button input
- Warning Indication and output

**CTG**
- Optional remote monitoring contact
- 4 MOVs or 3 MOVs + 1 GDT topology
- Socket with replaceable cartridge
