Solutions

Plastics Machinery
ABOUT CARLO GAVAZZI

Carlo Gavazzi Automation is a multinational electronics group active in designing, manufacturing and marketing electronic equipment targeted at the global markets of industrial and building automation.

Our history is full of firsts and our products are installed in a huge number of applications all over the world. With more than 80 years of successful operation, our experience is unparalleled.

We have our headquarters in Europe and numerous offices around the world.

Our R&D competence centres and production sites are located in Denmark, Italy, Lithuania, Malta and the People’s Republic of China.

We operate worldwide through 22 of our own sales companies and also selected representatives in more than 65 countries, from the United States in the West to the Pacific Rim in the East.

Our core competence in automation spans three product lines: Sensors, Switches and Controls.

Our wide array of products includes sensors, monitoring relays, timers, energy management systems, solid state relays, safety devices and fieldbus systems.

We focus our expertise on offering state-of-the-art product solutions in selected market segments.

Our customers include original equipment manufacturers of packaging machines, plastic injection moulding machines, food and beverage production machines, conveying and materials handling equipment, door and entrance control systems, lifts and escalators, as well as heating, ventilation and air-conditioning devices.
DESIGNED TO MEET MARKET REQUIREMENTS

The rising demand for processed food and beverages, followed by increasing requirements for packaging, is driving overall growth in plastics machinery applications. Accuracy, reliability and energy efficiency are becoming more and more important. Extrusion equipment has seen an interesting growth, with an increase in the demand for extruded goods. Injection moulding machines are used in a wide range of applications, ranging from automotive components to consumer goods.

The production efficiency of machines for plastics has continuously increased over the last few decades. Appropriate temperature control is essential to ensure good quality of the final outcome. The thermal stability necessary in such machinery can only be achieved through the use of solid state relays (SSRs) which are capable of meeting the demands for fast heater switching. Carlo Gavazzi offers a comprehensive range of SSRs which feature back to back thyristors in combination with direct copper bonding technology for increased lifetime and reliable operation of the SSR.

Carlo Gavazzi’s patented Tripleshield™ capacitive sensors have become the standard all other manufacturers are measured against. Capacitive sensors will detect most materials, conductive and non conductive. This makes them ideal for level detection in raw plastic delivery systems.

Carlo Gavazzi's ultrasonic, photoelectric and inductive sensors are also used extensively in plastics machinery.

In order to protect the working area, ensuring the safety of operators and the safe operation of the machines, Carlo Gavazzi provides configurable and standard safety modules and safety magnetic sensors.

The CERTUS configurable safety module offers up to 128 inputs and 16 pairs of programmable solid state outputs in a compact modular system, managing and monitoring safety sensors and commands, safety light curtains, photocells, emergency stops, two-hand controls, mechanical switches, laser scanners and safety mats.
Process stability is critical to ensure high product quality. Stable temperatures are achieved by constant switching. Carlo Gavazzi solid state switches provide extremely reliable solutions that permit the fast switching needed in these processes. The RGS1 series and RM1 series are 1-phase solid state solutions which can be mounted on a chassis or an external heatsink, whilst the RGC1 series is provided with an integrated heatsink, hence ready for use. The integrated over voltage protection and high surge current capability of Carlo Gavazzi SSRs ensure trouble free operation, preventing unnecessary machine stoppages which result in scrap material and high down time costs.

Carlo Gavazzi’s standard safety modules are used with safety light curtains, safety photo sensors, emergency stop buttons or safety magnetic switches.

In plastics machines, the gates must often be opened under safety conditions: the NES provides a safety-related interruption of a safety circuits. For applications that require flexible logic or the multiple coordination of 3 or more safety devices, the CERTUS configurable safety module delivers a superior product vs its competitors, in terms of features and competitive price. CERTUS is certified to the highest safety levels: SIL+, SILcl 3, PL e and Cat.4; it offers intuitive and quick logical configuration software, easy to set-up tamper proof safety systems, and a reduction in components and wiring.
Consistency and repeatability of extruded parts can only be ensured if the temperature control process is stable with minimum deviations from set points. Deviations from temperature set points are limited by fast switching of heaters which can only be done through solid state relays. Carlo Gavazzi offers a wide range of solid state solutions for temperature control of the barrel zones. The RGC1, RGS1 and RM1 series are 1-phase solutions, whilst the RGC3 series provides 3-phase switching solutions. The RM and RG series meet the industry EMC immunity requirements without the need for additional external components. Additionally, the RG series utilises wire bonding technology that reduces the thermal stress of the solid state switch, guaranteeing extended lifetime over other SSRs. The RGC1S and RGC3...M versions integrate detection of malfunction of the load or the SSR, where an alarm output is readily available for immediate intervention.

Capacitive, photoelectric and ultrasonic sensors are used to detect any interruption in the extruded pipe. They ensure prompt intervention in the case of interruption and round-the-clock monitoring of the extrusion process. In both injection machines and extrusion machines, Carlo Gavazzi’s switches and sensors ensure smooth and efficient production processes. Capacitive sensors in particular are widely used in silos.
Reliable thermal process control is key in determining the quality of the final outcome in blow moulding. An accurate thermal process can only be guaranteed by continuous monitoring of the load and system parameters. The RGC1S series offers the ideal solid state switching solution. The RGC1S is equipped with integrated current measurement and so is able to detect variations in load current, which will ultimately affect temperature. The integration of current measurement within the solid state switch eliminates the need for additional external monitoring and so gives more panel space as well as less needing installation time.

The load current is continuously monitored and if a deviation is observed a partial load failure alarm is issued. The RGC1S is also able to detect load and solid state switch malfunction. Photoelectric sensors and inductive sensors are installed along the machinery for part counting, detection and verification and for mould position detection. The VMU-C EM is a comprehensive web-based monitoring solution to keep track of energy consumption in industrial facilities and to improve the energy efficiency of the installation.
It is essential that plastics processing machines operate without breakdown. When the machine restarts after a breakdown, the material might have to be scrapped: this is typical of blown film extrusion. By using an ultrasonic sensor to check film loop tension, film breakage is prevented and interruptions in the production cycle are minimized. Three ultrasonic sensors placed round the cylinder of blown plastic film, measuring the diameter of the cylinder, are used for controlling the air pressure and maintaining a controlled diameter and thickness of the plastic film.

If the distance of the bubble surface from the machinery is not controlled, dangerous contacts can occur. Several analogue ultrasonic sensors can be positioned to constantly check the size and the shape of the bubble.

The IO-link ICB inductive sensors allow easy exchange of process data, remote configurations and events with simple and inexpensive 3-wire cabling, without needing to change the existing architecture. The ICB series, available from M12 to M30, can be completely configured to enable new functionalities such as the divider and speed control functions. To monitor the ON/OFF switching of groups of the heating elements, a DIA53 monitoring relay can be used. This does not need any auxiliary power supply. It is supplied by the measured current, with a built-in current transformer up to 100 A. Furthermore, a CPT power transducer checks the electrical parameters vital for the motor, as a motor running in overload condition can suffer irreparable damage.
In thermoforming processes, heating is a critical phase. The plastic sheet needs to be evenly heated at the right temperature before entering the forming phase; failure to control the heat evenly and precisely results in a poor quality product.

The temperature is controlled via a temperature sensor and the signal is then sent to a controller. The control needs to be extremely efficient and so fast switching of the heaters is mandatory. This can only be done with the use of solid state relays.

A number of heating zones are used to ensure even heating. This requires a number of solid state relays to control all the heaters and panel space is often a challenge. Carlo Gavazzi’s new series of solid state contactors, the RGC1F, offers a compact solution which also integrates fuse protection. This solution is provided in the same footprint as a standard solid state relay, whilst freeing up space normally utilised for protection components. An integrated solution provides savings on installation time and costs. Inductive sensors placed in the mould, at the end of the pins, can detect whether the mould is properly sealed, enabling the system to start with a new injection process, thus preventing damage to the machinery, as well as improving safety conditions.

The ICS series offer the ideal solution for industrial automation equipment in applications where space is limited. The extended sensing range together with the compact and robust stainless steel housing makes this sensor extremely reliable. The ICS05 with its very high switching frequency up to 6 kHz can be used where fast detection is a must. The variants with on-board IO-Link communication allow advanced sensing performance such as rotational speed monitoring and RPM counter.
Carlo Gavazzi components integrate into auxiliary equipment that is used in combination with plastics machinery, such as plastic dryers and dosing units, as well as stand-alone temperature control units for zone control. Wherever plastic granules are conveyed and processed, capacitive sensors monitor the levels in pipes and in silos or through a viewing window in loaders of injection machines, extruders and blow moulding machinery. Thanks to Tripleshield™ technology, Carlo Gavazzi capacitive sensors are protected against disturbance caused by high ESD up to 40 kV. Featuring EMC and ESD immunity, Carlo Gavazzi sensors – EC and CA series - detect the level of plastic pellets in the hopper whilst withstanding environmental interference. The sensing face (flush mounted) withstands temperatures up to 120°C.

The new PD30ET photoelectric sensors are ideal for industrial environments and work perfectly even in the harshest conditions. The high-quality stainless steel housing guarantees maximum mechanical resistance. Retroreflective and polarized retroreflective versions are used to check the level of plastic granules in loaders. Additionally, heaters for the drying of the plastic granules can be switched with the RM1A or RGC1A for 1-phase heaters or the RGC2A, RGC3A for 3-phase heaters. The RGC1P, RGC2P and RGC3P series offer the possibility of controlling the switching of the heater with an analog input (0-10 V or 4-20 mA) which can be fed directly to the SSR.

The touch screen BTM series reads the electrical measurement from Carlo Gavazzi energy meters or any other energy meter. It shows the data as instantaneous values and/or depicts it in diagrams.

#### RGC1P / RGC2P / RGC3P
- **Product width:** 35 mm up to 70 mm, DIN-rail or panel mount
- 1-ph with heatsink (RGC1P) or for panel mount (RGS1P), 3-phase with heatsink (RGC2P, RGC3P)
- Ratings: up to 660 VAC, 90 A (1-phase), 75 A/pole (2-phase), 65 A/pole (3-phase)
- Control input: 0-20 mA, 4-20 mA, 12-20 mA, 0-10 VDC, 0-5 VDC, 1-5 VDC
- Approvals/Marks: CE - cULus - cURus (RGS1P) - CSA (RGS1P) - EAC - CCC (RGC2P, RGC3P)

**MAIN FEATURES**
- Selectable switching modes
- Integrated overvoltage protection
- Monitoring for SSR and load circuit malfunctions (RGC2P, RGC3P)

#### RSWT
- **Motor rating:** Up to 45 kW (90 A)
- 3-phase controlled & internally bypassed
- Operational voltage: RSWT40: 220-400 VAC, RSWT60: 220-600 VAC
- PTC input, Alarm - Top of ramp - Run relay indication
- Approvals/Marks: cULus - CCC - EAC

**MAIN FEATURES**
- Easy to use and set up
- Self-learning algorithm to improve pump starts/stops
- Integrated overload protection (Class 10)

#### RSGD
- **Operational voltage range:** 187-440 VAC, 187-660 VAC
- Operational current range: 12 AIC up 100 AIC
- Control voltage: 24 VAC/DC, 110-400 VAC
- Auxiliary relays for top of ramp and alarms
- Approvals/Marks: cULus - CCC - EAC

**MAIN FEATURES**
- Serial communication (Modbus 2-wire) (RSGD 75mm models)
- Easy to use and set-up
- Self-learning algorithm to adapt to different loads

### Capacitive sensors

#### EC30
- TriplESHIELD™ sensor protection
- Dimensions: M30 mm
- Plastic or metal housing, DC and AC versions
- Approvals/Marks: CE - TUL - CSA

**MAIN FEATURES**
- High EMI immunity
- Protection: short circuit, transient and reverse polarity

#### CA18 / CA30
- 4th generation TriplESHIELD™ technology
- Dimensions: M18 / M30
- Plastic housings DC versions
- Sensing distance up to 30 mm
- Approvals/Marks: CE - cULus

**MAIN FEATURES**
- Highest EMI immunity
- ESD ratings up to 40 KV
- Sensing face temperature up to 120°C
- Best immunity towards inverters

#### PA18
- Dimensions: M18 x 39 mm
- Diffuse reflective sensors, 1 m detecting distance
- Cable or M12 plug versions
- Power supply from 10 to 30 VDC
- Approvals/Marks: CE - cULus

**MAIN FEATURES**
- Sensors used to detect the finished plastic items
- Fast mounting, smooth finish
- Sensitivity adjustment

### Our product range

#### Power transducers

<table>
<thead>
<tr>
<th>Model</th>
<th>Dimensions</th>
<th>Accuracy</th>
<th>Measurement</th>
<th>Front protection degree</th>
<th>Outputs Available</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CPT</strong></td>
<td>83.5x45x98.5 mm DIN-rail housing</td>
<td>0.5% (voltage, current)</td>
<td>CT and VT</td>
<td>IP20</td>
<td>Analogue, digital, pulse or serial</td>
</tr>
</tbody>
</table>

**Main Features**
- Very compact size power transducer
- Provides electrical variables set to a PLC to manage compressors and other loads
- Suitable for onboard panel installation

#### Touch screen/ Datalogger

<table>
<thead>
<tr>
<th>Model</th>
<th>Dimensions</th>
<th>Display</th>
<th>Power Supply</th>
<th>Repeatability</th>
<th>Approvals/Marks</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>BTM-T4-24 / BTM-T7-24</strong></td>
<td>4&quot; / 7&quot; colour display</td>
<td>Multi voltage</td>
<td>AC and DC</td>
<td>&lt; 0.2%</td>
<td>UL - CSA</td>
</tr>
</tbody>
</table>

**Main Features**
- Ethernet connection
- Wide screen display, 64 K colours
- USB port, SD memory, Modbus RTU serial port

#### Timers

<table>

<td>Delay on operate/release</td>
<td>Combined AC and DC</td>
<td>&lt; 0.2%</td>
<td>UL - CSA</td>
</tr>
</tbody>
</table>

**Main Features**
- Time range 0.1 to 600s - capacitor powered
- 4 time ranges selectable by DIP-switches, knob time setting
- Output: 8 A SPDT or 8 A DPDT relay

### Timers

<table>

</tbody>
</table>

**Main Features**
- Output power from 5 W to 480 W
- Power supply OK output
- Parallel connection feature
- Spring, screw terminals or detachable connectors

---

**Note:** Specifications are subject to change without notice. Illustrations are for example only.
Our product range

**Metal enclosed power supplies**

- **SPPC**
  - Output power from 15 W to 800 W
  - Input 110/240 VAC 1-phase
  - Short circuit, overload and overvoltage protection
  - PFC function available >75 W
  - Approvals/Marks: UL - CE

**Low profile DIN-rail power supplies**

- **SPM**
  - Output power from 7.5 W to 100 W
  - Input 110 / 240 V 1-phase and DC 120 V to 370 V
  - Short circuit, overload protection
  - From -25°C to +60°C operation w/out derating
  - Approvals/Marks: cULus - TUV - CCC

**Compact DIN-rail power supplies**

- **SPDM**
  - Output power from 30 W to 240 W
  - Universal input range of 110-240 VAC or up to 370 VDC
  - Short circuit, overload, overvoltage and over temperature protection

**Battery chargers & UPS**

- **SPUC / SPUBC**
  - Power supply, UPS and battery charger “All-in-one” (SPUBC), UPS controller (SPUC)
  - 12 or 24 VDC 5 A output (up to 30 A SPUC)
  - Power boost up to 2 times rated output, permanent (SPUBC)
  - Built in battery status, complete diagnosis (SPUBC)
  - Approvals/Marks: CE - UL approved

**CERTUS configurable safety module**

- **CMM**
  - 4 non-safety test outputs for sensor monitoring
  - 2 non-safety programmable digital signal outputs
  - 2 non-safety inputs for Start / Restart interlock and EDI
  - LOG file with 5 configuration modifications
  - Connection with other expansion units via rear bus
  - Also usable as a stand-alone device, able to control any other expansion unit
  - 8 safety digital inputs
  - 2 safety OSSD pairs (400 mA Output )
  - Certified to the highest safety levels: SIL 3 - SILcl 3 - PL e - Cat.4 - CE - TUV - cULus
### Our product range

<table>
<thead>
<tr>
<th>CERTUS configurable I/O expansion modules</th>
<th>CERTUS speed monitoring modules</th>
<th>CERTUS multifunction safety module</th>
