

CG APPLICATIONS

CARLO GAVAZZI

Application Note: July 4th 2007

Market involved : All

Product : PD30... RT

Customer : ---

Subject : Remote teach
Dynamic sensor setup

CUSTOMER ISSUE :

Using a sensor for various detecting purposes may require tuning of the sensing settings such as distance, sensing overhead etc.

OUR SOLUTION:

Connecting the remote teach input to e.g. a PLC makes it possible for the sensor to change settings on the fly.

The teach procedure is identical to the one used for manual teach via the teach button.

ACHIEVED BENEFITS:

- Setting up the sensor for new detection objects without stopping the conveying belt.
